Reference Letter

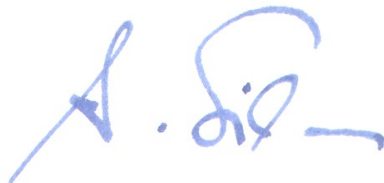

Dear Mr. Boytsov,

it was our pleasure to host you in our institute from 1st to 31st of March 2017. You were one of the students to participate in the “Leonhard-Euler-Stipendienprogramm” that we run between your home university State University Petrosavodsk and our university since five years.

From our side, we support this student exchange from the side of our Institute of Reliable Embedded Systems and Communication Electronics (ivESK), which is one of the leading R&D institutes about embedded communication solutions. With a team of ten research engineers and Ph.D. students and roughly the same number of students, we work on reliable, safe and secure, modular and efficient, wireless and wired communication solutions.

During your stay, you contributed to the development of a software framework to test cryptographic network protocols like TLS. Your task was to design and implement an interface between the core framework (mostly written in C++) and a database system based on MondoDB. You quickly became acquainted with his task and the software framework. You came up with a number of very good ideas on your own and were eager to solve issues autonomously instead of prematurely requesting support.

We wish you all the best for your personal and professional future

Prof. Dr.-Ing. Axel Sikora
Scientific Director
